Maintenance and Adjustment Engine Oil T908027 Oil Level Inspection Start the engine and run at idle for approximately five minutes. 1. Filler Stop the engine, then wait for at least three 2. Sight glass minutes for the oil to settle. 3. Maintenance and Adjustment Once the correct level is reached, re-install Oil and Oil and fully tighten the filler plug. Filter Change Warning If the engine has recently been running, the exhaust system will be hot. Before working on or near the exhaust system, allow sufficient time for the exhaust system to cool as touching any part of a hot exhaust system could cause burn injuries. Page 68 Start the engine and allow it to idle 1. Oil filter for a minimum of 30 seconds. • Unscrew and remove the oil filter using the Triumph service tool Caution T3880313. • Discard the oil filter. Raising the engine speed above idle, ... Maintenance and Adjustment Oil Specification and Grade Triumph high performance fuel injected Caution engines are designed to use 10W/40 or If the engine oil pressure is too low, the low 15W/50 semi or fully synthetic motorcycle oil pressure warning light will illuminate. If... Triumph dealer, checked by an authorized Triumph dealer However, in an emergency, throttle if any changes are detected. Changes can adjustments made be due to wear in the mechanism, which follows: could lead to a sticking throttle. To avoid incorrect adjustment, incorrect routing, or continued use of a sticking or damaged throttle, always have the throttle checked and adjusted by your authorized Triumph dealer. Note: ccip • Minor adjustments can be made 1. Triumph dealer and have cable-operated clutch, them check the throttle system If the clutch lever has excessive free play, the thoroughly before riding again. clutch may not disengage fully and could then cause the engine to stall and create difficulties when shifting gear. 3. 0.08 - 0.12 in (2 - 3 mm) • Knurled locknuts are fitted to • Check that there is 0.08 - 0. 1 2 in Thruxton and Bonneville T100 (2 - 3 mm) of clutch lever free play models only. Bonneville... Maintenance and Adjustment • Turn the outer cable adjuster to give Drive Chain 0.08 - 0. 1 2 in (2 - 3 mm) of free play at the clutch lever. • Tighten the locknut. • Use the lever adjuster to make minor adjustments as necessary. For Thruxton and Scrambler the vertical movement of the drive chain must be 1. 1.8 - 1.57 in (30 - 40 mm). • Bonneville vertical movement of the drive chain must be 0.59 - 1. 1.8 in (15 - 30 mm). Page 76 Maintenance and Adjustment Adjustment both sides of the motorcycle. Adjust as necessary if incorrect. • If the chain free-movement measurement is incorrect. • Rotate the rear wheel and repeat the adjustments must be made as chain adjustment check. follows: Re-adjust if necessary. • ... • Rotate the rear wheel and inspect For safety, use a genuine Triumph supplied the drive chain for damaged rollers, chain as specified in the Triumph parts and loose pins and links. Maintenance and Adjustment Brakes Caution If the sprockets are found to be worn, always replace the sprockets and drive chain together. Replacing worn sprockets without also replacing the chain will lead to premature wear of the new sprockets. T908039 1. Lining material thickness 2. It is dangerous to operate the motorcycle under such conditions and remedial action must be taken by your authorized Triumph dealer before riding. Riding with defective brakes may lead to loss of motorcycle control and an accident. Page 80 Any absorbed moisture will greatly reduce Triumph dealer for advice, before riding, the boiling point of the brake fluid causing Contaminated brake fluid may cause the a reduction in braking efficiency. Maintenance and Adjustment Front Brake Fluid Level Inspection Front Brake Fluid Level Inspection and Adjustment - Bonneville T100 and Adjustment - Bonneville, including the Steve McQueen™ Bonneville SE and Scrambler Edition, Bonneville 110 Edition and Thruxton jalc 1. Upper level line, front brake T908040 1. Rear Brake Fluid Level Inspection • Fill the reservoir to the upper level line using new DOT 3 or DOT 4 and Adjustment - Bonneville, fluid from a sealed container. Bonneville SE, Bonneville T100 • Install the reservoir cap ensuring that including the Steve McQueen™ ... Maintenance and Adjustment Rear Brake Fluid Level Inspection positioned between the cap and reservoir body, and Adjustment - Scrambler • Position the reservoir cover to the frame and secure with the two fasteners previously removed. Tighten the fasteners to 62 lb in (7 Nm) Ensure that the position of the support • If any free play can be detected, ask block will not cause damage to the oil lines your authorized Triumph dealer to or oil filter beneath the sump. inspect and rectify any faults before riding. • Examine each fork stanchion for any your authorized Triumph dealer inspect the sign of damage, scratching of the wheel bearings, slider surface, or for oil leaks. Maintenance and Adjustment Suspension Setting Each graduation line should be set in alignment with the upper surface of the fork All models except the Triumph have non-cap, adjustable front suspension. Only Thruxton is fitted with adjustable front suspension. Warning Ensure that the adjusters are set to the Warning same setting on both front suspension... Maintenance and Adjustment settings for rear suspension pre-load under Bonneville T100, Bonneville 110 differing load conditions. Edition, Thruxton and Scrambler To change the rear suspension spring pre-load setting, insert a suitable tool into the Loading Front Rear hole provided in the adjuster ring. Failure to use an inner tube in a spoked wheel will cause deflation of the tire resulting in loss of motorcycle control and an accident. Bonneville and Bonneville SE models are equipped with tubeless tires, valves and wheel rims. only... Page 89 Maintenance and Adjustment Warning Do not install tube-type tires on tubeless Inner tubes must only be used on rims. The bead will not seat and the tires motorcycles fitted with spoked wheels and could slip on the rims, causing rapid tire with tires marked 'TUBE TYPE'. 90% of all tire problems occur Alternatively, ask your authorized Triumph during the last 10% of tread life (90% worn). dealer to inspect your wheels and tires. It is therefore not recommended to use tires until they are worn to their minimum. Always consult your authorized Triumph dealer for tire replacement, or for a safety inspection of the wheels, spokes and tires. Warning Only operate this Triumph motorcycle at high speed in closed-course on-road competition or on closed-course racetracks. High-speed operation should only then be... Always have tires and inner 'TUBELESS' and/or on an alloy wheel can tubes installed and balanced by your lead to loss of motorcycle control and an authorized Triumph dealer who has the accident, necessary training and skills to ensure safe, effective mounting. Page 93 Warning When replacement tires or inner tubes are Tires and inner tubes that have been used required, consult your authorized Triumph on a rolling road dynamometer may dealer who will arrange for the tires and become damaged. In some cases, the... Maintenance and Adjustment Battery Battery Disposal Warning Under some circumstances, the battery can give off explosive gases; keep sparks, flames cigarettes away. Provide adequate ventilation when charging or using the battery in an enclosed space. The battery contains sulphuric acid (battery acid). Maintenance and Adjustment • Remove the seat as described in the Battery Maintenance General Information section. Clean the battery using a clean, dry cloth. Be • Disconnect battery leads, sure that the cable connections are clean. negative (black) lead first. • ... For help in selecting a battery charger, will reduce the rate of discharge, checking the battery Voltage or battery charging, contact your local authorized Battery Discharge During Storage Triumph dealer. and Infrequent Use of the Motorcycle Warning During storage or infrequent use of the motorcycle, inspect the battery Voltage The battery gives off explosive gases;... Should the battery Voltage fall below may cause a short circuit or spark which 12.7 Volts, the battery should be charged would ignite battery gases causing a risk of using a Triumph approved battery charger. personal injury and damage to the Always remove... Maintenance and Adjustment Fuses Fuse Identification The fuses can be identified by a number Fuse Location moulded into the fusebox housing, adjacent to each fuse, as shown below. These numbers Fuses are arranged in the fuse box located correspond to the numbers given in the table behind the right hand side cover. Maintenance and Adjustment A blown fuse is indicated when all of the Headlight systems protected by that fuse become inoperative. When checking for a blown fuse, Warning use the table below to establish which fuse has blown. Adjust road speed to suit the visibility and weather conditions in which the motorcycle Fuse Circuits Protected... Maintenance and Adjustment Headlight Adjustment Headlight/Position Light Bulb Replacement • Horizontal adjustment headlight beam is controlled by the screw in the rim of the headlight. Turn the screw clockwise to move beam left counter-clockwise to move the beam to the right. • ... Maintenance and Adjustment • Installation is the reversal of removal. Brake/Tail Light/License Plate Light Brake/Tail Light T908049 1. Wire retainer 2. Headlight bulb 3. Position light T908050 1. Brake/tail light lens screws 2.
